legeti tipul declaratiei	alegeti optiuni validare			
승규는 아이는 것은 것이 아파 가지 않는 것이 같다.				

choose the declaration type (alegeti tipul declaratiei) - is already defined

_

- XML validation (validare) = by pushing this button, you will validate the XML file.

In case that there are not errors at all, you will receive the message :"validare fara erori "(validation without any errors)

In casethere are errors, you will receive the following message :"erori la validare fisier..... Erorile au fost scrise in fisierul (errors received at the file validation The error has been written in the txt file The tool, in case of errors received in the validation process, creates an txt file , where you can find the errors, as per CESOP XSD schema user guide.

- XML validation+ pdf creation (validare+creare pdf) = by pushing this button, you will validate the XML file and also create the pdf "recipise". In case that you receive errors, this "recipise" (recipisa) will not be created, but a txt file with the errors receive in the validation process will be created.

ntroduceti nume fisier XML sau nume	folder (pt. a prelucra toate	fisierele XML din el) sau folos	iiti butonul <alege fisiere=""></alege>
